

48" MOWER MANDREL KIT

CONDITION: The left and center mandrel pulleys may loosen and fail to drive the blades. Tractors with 48" mower will have serial numbers date codes between 040104 to 041604.

For loose pulley condition (before damage to pulley or mandrel) use washer kit 192999. The kit includes an additional washer for installation on the left and center mandrels. Torque the mandrel pulley nuts at 65 to 85 Ft.Lbs. Torque blade bolts at 45 to 55 Ft.Lbs.

If the mandrel and pulley are damaged the following kits can be ordered. Two washers should be installed between the pulley and the upper bearing. An additional washer is included to install on the center or left mandrel that has not failed.

192654 – Kit for non-greaseable mandrels

192656 – Kit for greaseable mandrels

173436 – Part number for pulley

A Spacer Washer is not required on the double pulley because the additional pulley serves as a spacer.
